

| Degrees (F) | Resistance (Ohms) | Volts w/ 2k Pullup |
|-------------|-------------------|--------------------|
| -40         | 84.27             | 0.202              |
| -4          | 89.54             | 0.214              |
| 32          | 100               | 0.238              |
| 68          | 107.79            | 0.256              |
| 104         | 115.54            | 0.273              |
| 140         | 123.24            | 0.290              |
| 176         | 130.9             | 0.307              |
| 212         | 138.51            | 0.324              |
| 248         | 146.07            | 0.340              |
| 284         | 153.585           | 0.357              |
| 320         | 161.05            | 0.373              |
| 356         | 168.48            | 0.388              |
| 392         | 175.86            | 0.404              |
| 428         | 183.19            | 0.420              |
| 464         | 190.47            | 0.435              |
| 500         | 197.71            | 0.450              |

Sensor to ground, 2.0 k $\Omega$  pull-up to a 5.000 V reference:  $V = 5.000 \times R / (R + 2000)$ . Doubling the pull-up from 1 k $\Omega$  to 2 k $\Omega$  roughly halves the signal span (0.202–0.450 V vs 0.389–0.825 V over –40 to 500 °F).
